

Stroke & Neuro Rehabilitation

Intensive, round-the-clock step-down rehabilitation for stroke survivors and neurological conditions, using task-oriented training to rebuild motor function and self-reliance.

INTERACTIVE RECOVERY PROTOCOL

DAYS 1 - 7: SENSORY & TONE PREP

Baseline neuro assessments, spasticity/tone management, anti-contracture posture positioning, and safe multi-person transfers.

DAYS 8 - 21: NEUROPLASTIC RETRAINING

Intensive task-oriented repetitive training to drive neural rewiring, trunk control stabilization, dynamic reaching, and guided corridor gait walking.

WEEKS 3 - 6: STRIDE & ADL INDEPENDENCE

Parallel rail walking drills, balance perturbation training to prevent falls, intensive daily activities practice, and simulated home trials.

EXPECTATIONS

Neuro Protocols

PNF diagonal stimulation and CIMT upper limb restriction therapy.

Tone Modulation

Deep pressure stretch, thermals, and neuro-cryotherapy.

Specialized Devices

Active-Passive cycles with spasm reversal & drop-foot FES.

Clinical Team

Led by Dr. Ashok P. Kota with 24/7 skilled neuro-nursing.

VERIFY ADMISSION ELIGIBILITY

Review patient logs, coordinate safe hospital transfers, and secure your specialized neurological recovery suite.
