

Post-Op Orthopedic Recovery

Structured high-frequency step-down rehabilitation following knee/hip replacements and spinal surgeries to safely restore walking symmetries and absolute independence.

INTERACTIVE RECOVERY PROTOCOL

DAYS 1 - 3: IMMEDIATE POST-OP

Safe bed-to-chair functional transfers, continuous pain monitoring, swelling management via compression and cold therapy, and gentle passive motion.

DAYS 4 - 10: EARLY WEIGHT-BEARING

Guided weight shifting on stance corridors, active-assisted flex drills, and targeted quadriceps/hamstrings isometrics to combat postoperative atrophy.

WEEKS 2 - 4: MOBILITY MASTERY

Complete transfer independence, resistance bands training, gait symmetry correction, and navigating household stairs safely under expert oversight.

EXPECTATIONS

Range Restoration

Automated Continuous Passive Motion (CPM) mechanical knee flex angle builds.

Pain & Swelling

Controlled cryotherapy sleeve systems and pneumatic leg compression.

Gait Re-Education

Stance corrections to eliminate limps and balance physical weight.

Clinical Wound Care

Sterile dressing audits, infection screening, and suture line protection.

VERIFY ADMISSION ELIGIBILITY

Review surgical details, coordinate seamless hospital transfers, and secure your specialized orthopedic recovery suite.
